## Education

**Monash University** | Melbourne, Victoria, Australia

Bachelor Commerce and Science in Mathematical Foundations of Econometrics, Mathematics and Computational Science

**2023-2025**

**GPA: 2.85/4 | WAM: 73.3**

- Awarded with summer and winter vacation research scholarships
- First place in an IMC algorithmic trading competition for Monash students hosted by Monash Association of Coding (MAC)

## Experience

**Teaching Associate**

**Feb 2024 - Present**

*Monash University*

- Achieved 89% student satisfaction rating exceeding the faculty average of 82% by providing engaging, individualised and interactive classes and explanations
- Collaborated with fellow TAs to deliver applied classes, sharing feedback to drive continuous teaching improvements and enhance student learning outcomes

**Research Scholarships**

*Monash University*

**Nov 2024 - Feb 2025 - Dr. Buser Say**

*Python, SCIP, Constraint Programming*

- Continued extending SCIPPlan to allow users to provide a system of odes to be solved and used in the planning process supporting engineers and physicists in their work
- Incorporated function interpolation, introducing flexibility to the planning process and allowing for more complex problems to be solved

**Jul 2024 - Dr. Buser Say**

*Python, SCIP, Constraint Programming*

- Developed SCIPPlan+, an automated planner for discrete and continuous time planning problems with stochastic domains
- Researched the applications and performance of SCIPPlan+ over a variety of domains

**Nov 2023 - Feb 2024 - Dr. Buser Say**

*Python, SCIP, Constraint Programming*

- Refactored and extended [SCIPPlan](#) an automated planner for continuous time sequential planning problems over non-linear domains
- Assessed the performance of SCIPPlan in identifying optimal plans by formulating diverse problems with non-linear constraints with results organised and published in [research paper](#)

**Jul 2023 - Dr. Buser Say**

*Python, Cplex, Gurobi, Seaborn, MILP*

- Investigated various linear programming constraint formulations based on neural network transition functions
- Benchmarked and presented different solvers and formulations finding results of over 2x decrease in solve time

## Projects

[Finance API](#)

*Python, FastAPI, PyTest, BeautifulSoup*

- Designed, implemented and hosted using serverless hosting an API which fetches stock information, financial statements and currently listed options
- Utilising multithreading, scraped statements from multiple tables leading to up to a 5x increase in speed
- Constructed a Google Sheets add on to pull data into the spreadsheet, being used for over \$15,000 in investments
- Implemented unit testing using pytest in order to provide stability and reliability on future features and versions

[Stock Paper Trader](#)

*Python, Flask, SQLAlchemy, PostgreSQL, HTML, CSS, Bootstrap*

- Built a CRUD app which allows users to make imitation stock transactions to aid in investing education
- Hashed user passwords on registration in order to prevent malicious actors from accessing the private data
- Utilised my "[Finance API](#)" to retrieve financial data to display and create stock sales and purchases

## Technical Skills

**Languages:** Python, R, Typescript, C, C++17, SQL, HTML/CSS

**Frameworks:** Flask, FastAPI, PyTest, Vue, Nuxt, JUCE

**Developer Tools:** Git, Docker, RStudio, Linux, Vercel, GCP

**Libraries:** BeautifulSoup, Pandas, Matplotlib, Numpy/Scipy, Pytorch, Tidiverse, Fable, Cplex, Gurobi, SCIP

**Academic Concepts:** Analysis, Linear Algebra, Probability, Optimisation and OR, Automated Planning, Scheduling, Graph Theory, Forecasting, Statistical Modelling, Econometric Theory
